HANSEN ST SERIES

QUICK-CONNECTING

To connect a Hansen ST series coupling, simply pull back the spring-loaded sleeve and push the socket on to the plug – the sleeve then snaps forward to lock the coupling securely; to disconnect, just pull the sleeve back to unlock the coupling.

- No tools nor skill are needed to operate Hansen ST couplings
- Joints are guaranteed leak-free every time
- Couplings can swivel through 360° when connected, reducing hose stress and facilitating installation
- The locking mechanism is robust, reliable and maintenance-free

STRAIGHT-THROUGH

Hansen ST series couplings are specifically designed as straight-through couplings without self-sealing valves.

- Their smooth, unrestricted bore permits full flow of liquids and gases
- Alternative hose stem and threaded end connections give neat, compact installations with the minimum number of joints.
- Availability in brass and stainless steel allows a wide variety of fluids to be handled without corrosion

HANSEN QUALITY

Hansen couplings have a world-wide reputation for quality of design and manufacture. Hansen's renowned quality standards – tight tolerances on mating parts, micro-finished sealing surfaces, and precision elastomer seals – mean that Hansen couplings give long, dependable service, even in the most difficult industrial applications. Although many copy Hansen designs, few duplicate the high standards of materials specification and manufacturing quality which Hansen steadfastly maintains.

SEALS

Hansen ST couplings incorporate high grade elastomeric seals. The nitrile seal material supplied as standard gives excellent resistance to oil, air, water and many other liquids and gases. In addition various optional seal compounds, eg. Viton, EP, etc. are readily available as alternatives where specific fluids not compatible with the standard material are to be handled or where arduous operating conditions such as elevated temperature apply. This choice of seal materials, in conjunction with the alternative metals available, allows Hansen ST couplings to give service in an unrivalled range of applications.

PRESSURE RATINGS

Service Pressure rating provides a maximum safe pressure in bar suitable for air or other gas applications; for liquid applications (eg. hydraulics), the service pressure ratings may be increased by 60%. Longer service life may be obtained at lower system pressures. Failure Pressure rating is based on actual test; it is the pressure in bar at which a new coupling became inoperative or started to leak during a single pressure application. NB: Not suitable for disconnection under pressure.

SERIES	BRASS		STAINLESS STEEL		BRASS SOCKET/STEEL PLUG	
	SERVICE	FAILURE	SERVICE	FAILURE	SERVICE	FAILURE
1ST	170 bar	690 bar	290 bar	1170 bar	180 bar	725 bar
2ST	360	1450	460	1860	380	1515
3ST	185	760	380	1515	240	965
4ST	150	620	205	825	185	760
6ST	115	480	115	480	115	480
8ST	83	345	115	480	135	550
10ST	115	480	150	620	185	760
12ST	95	385	170	690	150	620
16ST	95	385	100	410	150	620
20ST	60	255	–	–	100	410

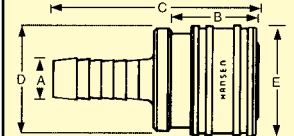

Pressure ratings shown are valid for Group 2 fluids only [per Pressure Equipment Directive 97/23/EC, Art.9 (2)]. Consult Guyson Technical Department for Group 1 (dangerous) fluids ratings.
