DRY-BREAK HOSE COUPLINGS

FOR SPILL-FREE LIQUIDS HANDLING

Connect and disconnect without spillage

Increases safety, saves cost of product wastage, protects operator, and eliminates environmental pollution.

Simple, one-step operation

Connection and disconnection is by one simple turn through 100°.

Operating mechanism is internally enclosed with no vulnerable external levers.

Foolproof interlocking of valves

Sequential interlocked valve design means that coupling only disconnects after both valves are fully closed.

Removes the human error element in product handling - unauthorised connection or disconnection has no adverse safety consequences. Simplifies operation and removes the need for a separate isolation valve.

Built-in 360° swivel

Contributes to ease of handling and prevents torquing of hose.

Reduces stress and wear by allowing hose to relax to its natural position. Coupling operates independently of hose orientation.

Connect and disconnect under pressure

Can be connected under differential pressures up to 7 bar.

High flow rate + low pressure drop

Specifically designed for high volume transfer of liquids.

Wide range of sizes and materials

Available as standard in aluminium, brass/gunmetal and stainless steel, in sizes from DN25 up to DN150 (1" nb up to 6" nb). Standard seals are Viton, with nitrile, EPDM, Chemraz, Kalrez, etc., as options.

Simple, robust construction

Few moving parts, low maintenance, easy servicing and repair.

Selectivity option

Specifying this extra feature allows dedication of a hose unit to its correct tank unit (s), physically preventing incorrect connection and potential product cross-contamination.

FLOW CAPACITIES

PRESSURE RATINGS

DN25-100 (1"-4"nb)

Aluminium, brass/gunmetal: 10 bar
Stainless steel: 25 bar

DN150 (6"nb)

Aluminium, gunmetal: 6 bar
Stainless steel: 10 bar

GUYSON SERVICE

The Hose & Couplings Division of Guyson offers immediate technical advice and assistance in selection of suitable couplings for any application, based on more than 80 years of specialist experience. Comprehensive stocks of couplings, spares, accessories, adaptors, etc. are available for immediate despatch.
